

Legs - Fasciotomy-Crush Injury

Photo 1

Patient sustained a crush injury to the lower leg. Compartment syndrome resulted in a four compartment fasciotomy.

Photo 2

Following application of DermaClose the wound margins mobilized well. The wound showed immediate reduction in size.

Photo 3

On day 4 the patient returned for final wound repair. The medial fasciotomy was fully approximated and closed first. This lateral wound was well approximate and was prepared for closure.

Photo 4

The wound was closed successfully with skin glue, retention sutures and steri-strips.
